Manufacturing and Integration

Technology Services Group®

TAG's Technology Services Group® specializes in the manufacturing and integration of innovative IT solutions for military, government, and industrial customers. We provide unmatched reliability for your project by offering turn-key solutions designed for harsh environments. Additionally, we specialize in the ruggedization of sub-system components, reliability testing, and design validation. All of TAG's designs are built in our 34,000 square foot Advanced Engineering and Tactical System Manufacturing Center. The facility features a state-of-the-art production floor and multiple testing sites where TAG implements systematic manufacturing and quality assurance processes for increased reliability.

TAG's integration capabilities combine our engineering and manufacturing expertise for the delivery of cost-effective solutions. Our integration services include component identification, vendor selection, inventory management, thermal optimization, weight and balancing, and power and cable management. From large systems to small components, TAG will take the headaches and guesswork out of the IT requirements of your program.

Benefits of the TAG Manufacturing Process

- Allows for a just-in-time acquisition and delivery process that eliminates waste and reduces cost
- Detailed planning and integrated throughout reduces labor costs and benefits our clients
- Ongoing quality control techniques quickly spot deviations in the line

Benefits of the TAG Integration Services

- Extensive consultation services keep your goals at the forefront of all designs
- Advanced knowledge of environmental requirements
- Inventory management, lifetime buying options, and safety stocking allow for smooth logistics and program management
- Component ruggedization and design validation reduce cost through product longevity
